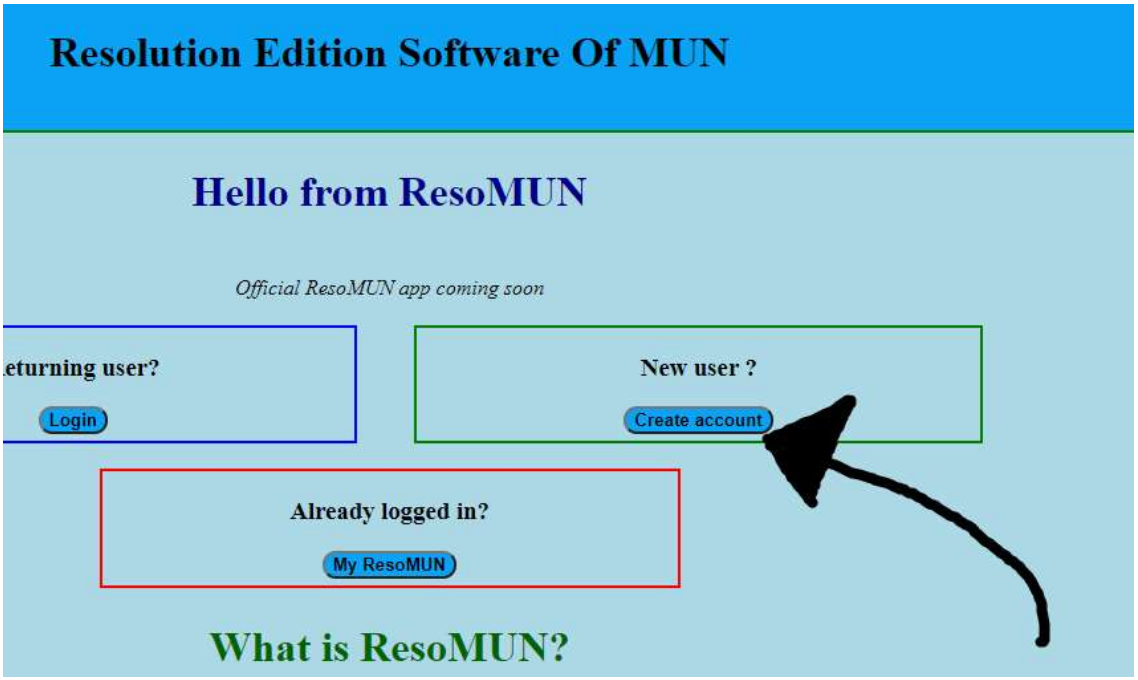
Geeky section 21
Special Thanks 22

Create an account and login:

First and foremost, you'll need an account to log into ResoMUN. If that's not the case, navigate to the main page of ResoMUN, click the 'Create account' button and fill out the form.



Here's what it should look like after you fill out the form:

Here, I made an account for Shrek (the password is onions if you're ever interested).

If this message appears, you've successfully created your account.

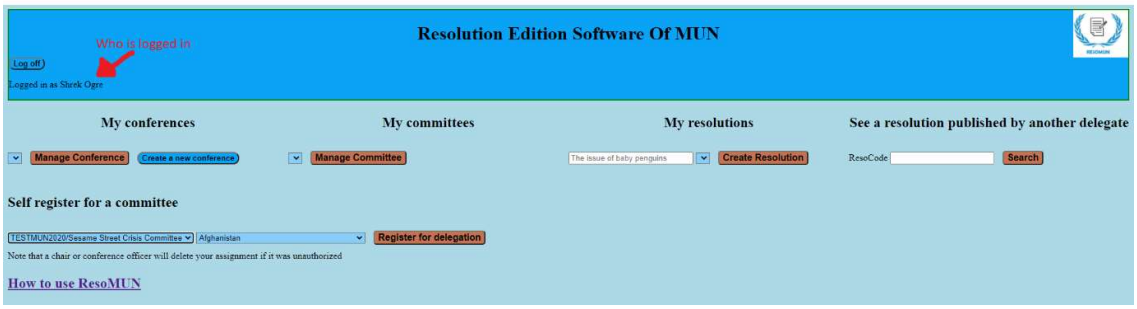
Click the 'Back to Index' button next

Back on the homepage, you'll want to click the button that says 'login':

Once on this page, enter your email and password

And click the 'login' button

You have now reached the main page for resomun! The fun begins now

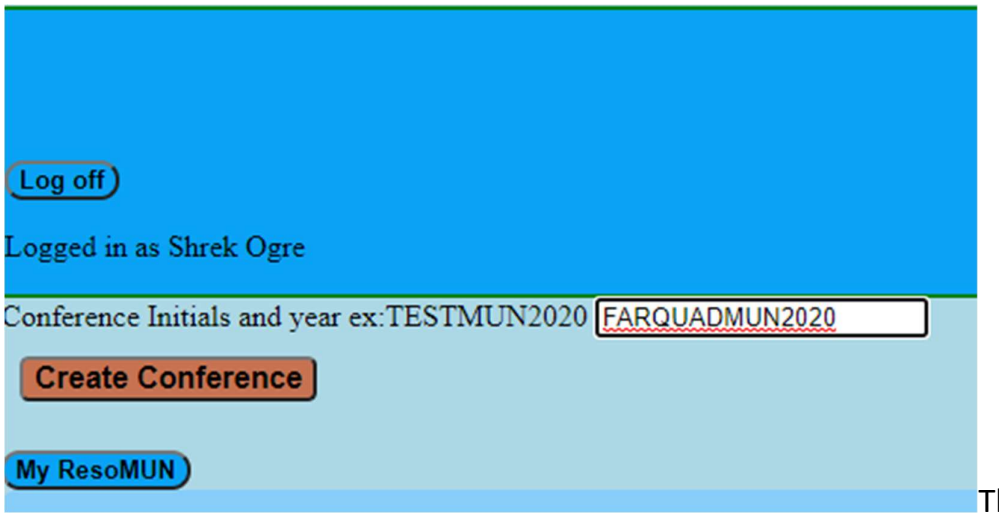


And on PC, your web browser tab should look something like this:

Conference officers

The first step in being a conference officer is meeting your secretary general. In the case of ResoMUN, the SecGen is automatically given to the person who creates the conference.

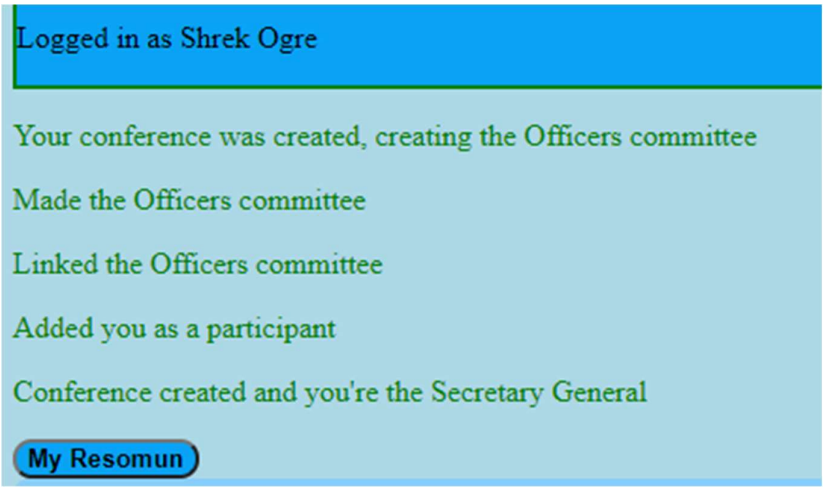
Since Shrek is not an officer for any conference, we'll create one for him by clicking the 'Create a new conference' button.



This is what your page should now look like. Enter the name of your conference and click create conference. PLEASE DO NOT LEAVE THE CONFERENCE TITLE FIELD

EMPTY AND ONLY CREATE A CONFERENCE IF YOU'RE GOING TO USE IT. This will: create your conference, put you as a secretary general and allow you to manage your conference.

Since the database is not well made (thanks Alex for that), everyone needs a committee assigned. Chairs get assigned to the committee they chair but conference officers get assigned to a secret committee called (in this case) OFFICERS_FARQUADMUN2020.



If everything appears in green, your conference is now live! Congrats!

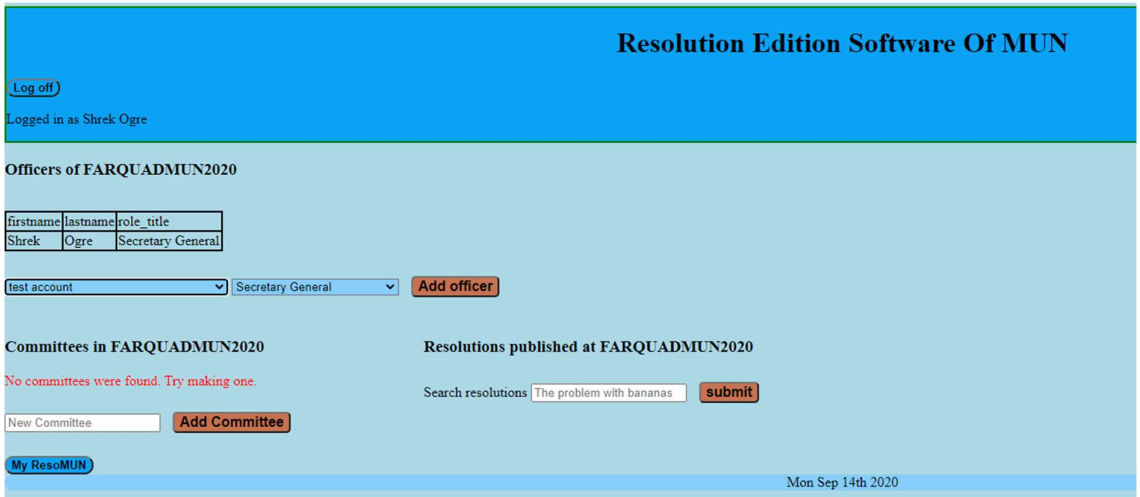
Click the 'My ResoMUN' button and let's manage your conference!

The 'My conferences' section is composed of 3 parts:

- The 'Create a conference' button (you know what that does now)
- The selector on the left
- The 'Manage Conference' button on the right

Using the selector, you can select which conference you want to manage then when you found the right one (in this case, the only one there is for Shrek is 'FARQUADMUN2020') click the 'Manage Conference' button to, well, manage your conference.

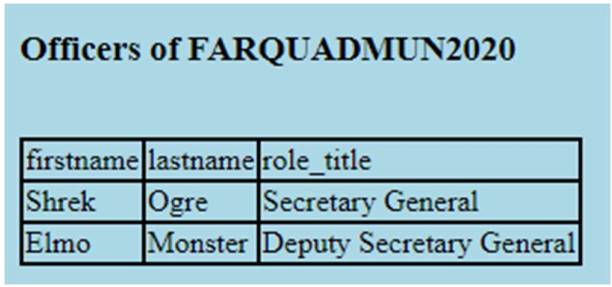
You have now reached the page for your conference.



In the top left, you can see who the conference officers are and their titles (you can have as many of each, at this point, I don't care what you do anymore). There's also a form to add people as conference officers. I'll do that now. Using the selectors, select the person you want to assign and the role you want to give. Here, I'm making Elmo my deputy secretary general.

Click the 'Add officer' button. A warning should appear.

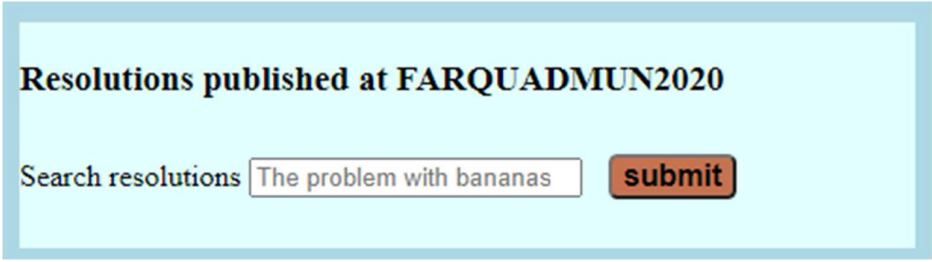
Click OK and watch as your new conference officer appears in the registry.



Officers of FARQUADMUN2020

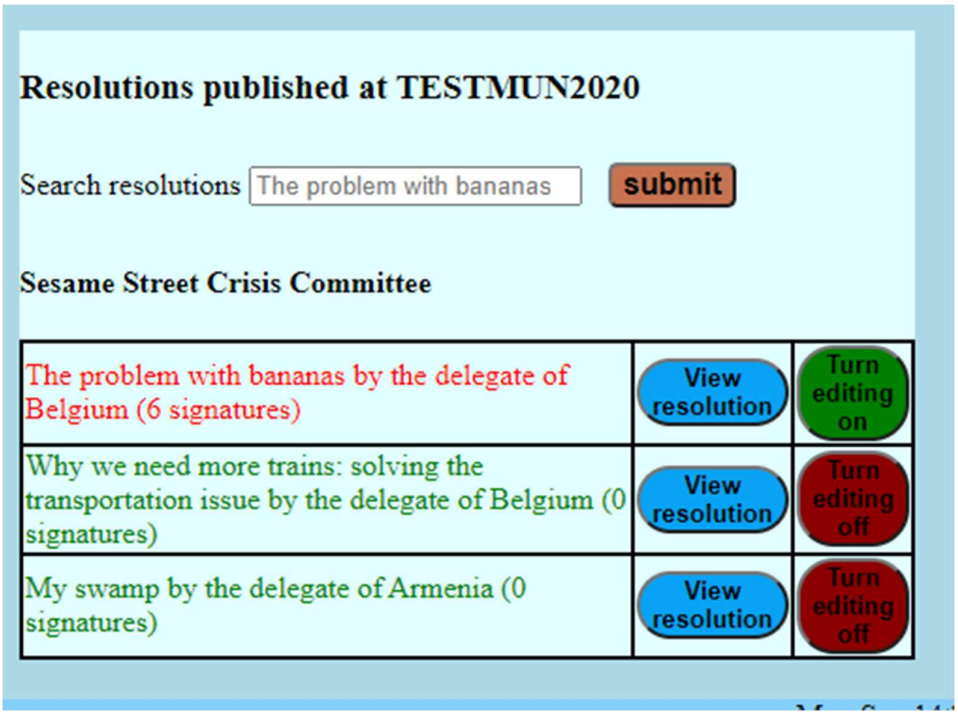
firstname	lastname	role_title
Shrek	Ogre	Secretary General
Elmo	Monster	Deputy Secretary General

In the Resolutions box, you will see each Resolution that's been published by committee.



You can use the search bar to look for one in particular.

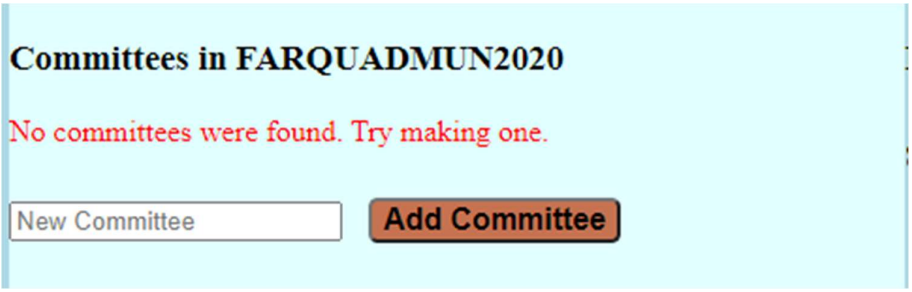
Since there are no committees in FARQUADMUN2020 (for now), nothing appears.



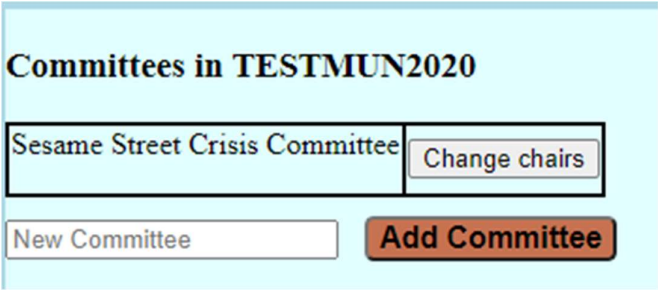
This is what a conference with several resolutions looks like.

Let's make a committee.

First, have a look at the Committees box.



No committees are registered yet.



This is what a non-empty committees box looks like.

Enter the name of your new committee in the textbox and click the 'Add Committee' button to create your committee.

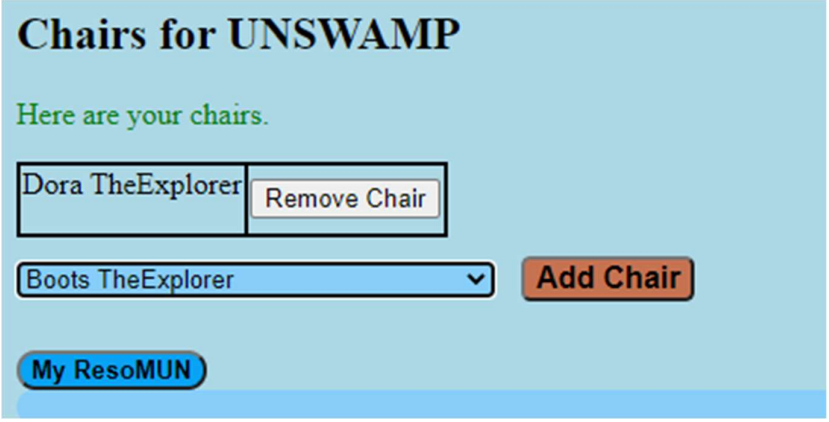
You're brought back to your ResoMUN (the main page) but something has changed. You can now manage a committee (but that'll be covered later).

Go back to your conference (select it in the selector and click 'Manage conference').

You can now assign chairs for your committee! You'll be able to manage each committee yourself, if you don't want to add chairs, you don't need to add some.

Clicking the 'Change chairs' button will bring you to a page looking something like this:

Choose your new chair and click the 'Add chair' button to assign the role.



Dora is now your new chair (although Dora is a test account and will never do anything if you add her in). You can click the 'Remove Chair' button to remove her as a chair (if she did something inappropriate for example).

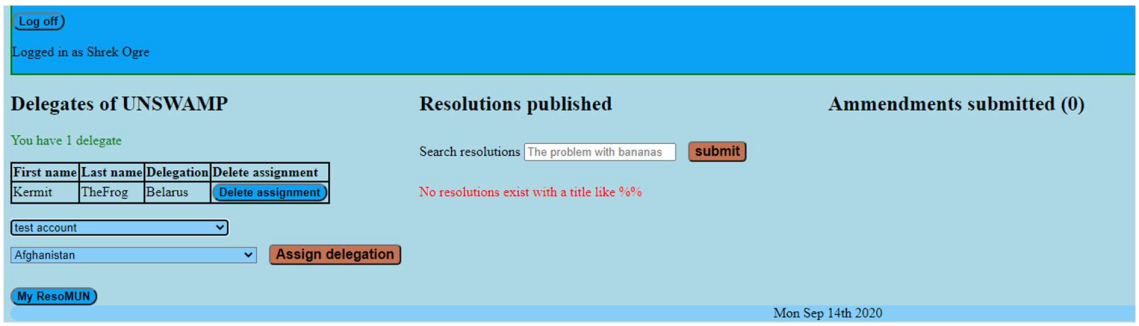
Conference officer / Chair

Congrats, you've been chosen as a chair for FARQUADMUN2020/UNSWAMP, you must have messed up somewhere to end up here.

Let's have a look at what you can do:

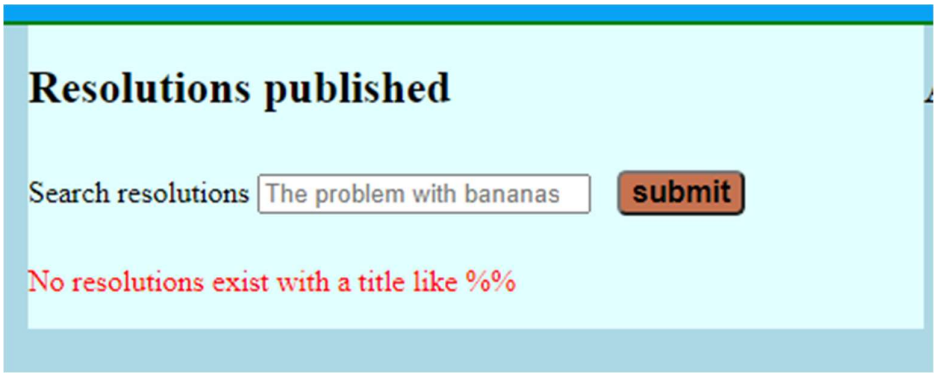
Start by selecting the committee you're chairing (or you want to manage) and click the 'Manage Committee' button.

Welcome to the page for the UNSWAMP committee.

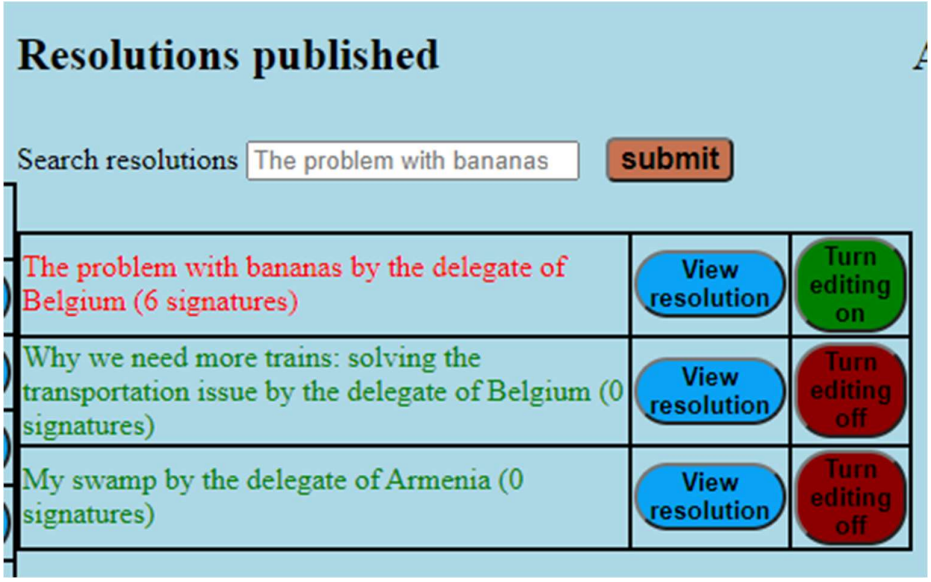


On the furthest left, you'll have a nice grid summarizing who is in your committee and a form to add people manually to your committee. Here, Kermit TheFrog is our only delegate for now but you can add more by selecting a name (from the entire database of ResoMUN accounts) and a delegation (from the 196 members states of the UN, contact alexandrerobic312@gmail.com to add more). You can click the 'Delete assignment' button next to each name and remove that delegate's assignment in case someone signed up incorrectly.

Just like for a conference, you can see the resolutions published in your committee and look them up.



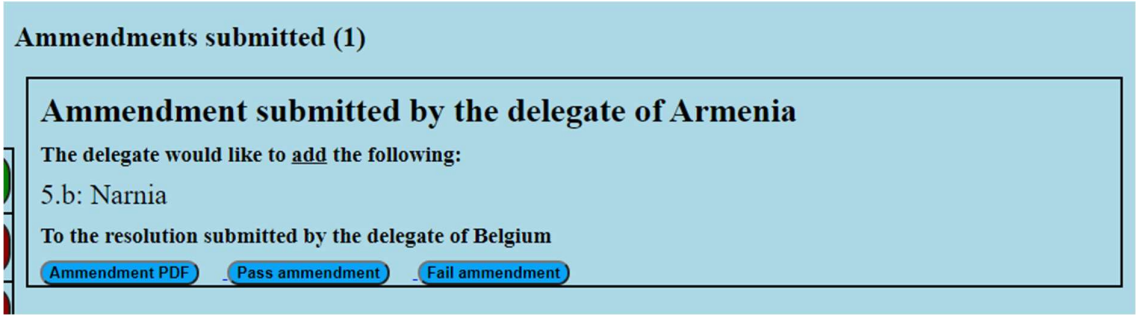
Since there are no resolutions for now, none will appear and since you didn't write anything in the search bar, that red message will appear.



This is what a committee with several resolutions looks like. You can turn the editing on or off depending on whether or not debate has started.

Finally, the ammendments submitted in your committee will appear here too:

You can guess why this square is empty…



This is what a submitted amendment looks like.

Delegate

On the home page for your account, you'll find a pair of selectors to sign yourself up to a conference and committee.

Look for your conference/committee pair in the first selector and your delegation in the second one and click the 'Register for delegation' button.

Here, we're registering for conference TESTMUN2020 (another test conference) as the delegation of Armenia.

After registering, you should notice a change in the 'My Resolutions' part of the page.

You can now select a conference/committee pair to publish a resolution in!

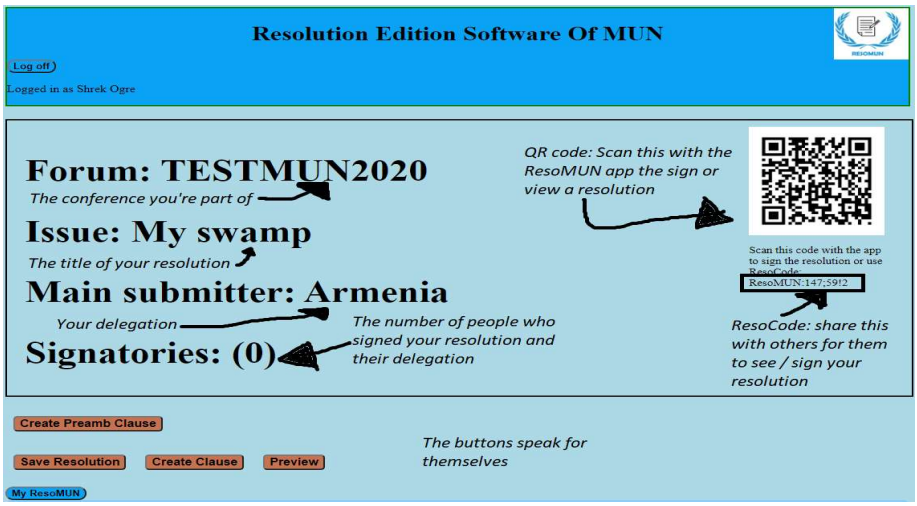
(The issue with baby penguins is just a placeholder).

Select which conference/committee you want to publish your resolution in, enter a title for your resolution and hit 'Create Resolution'. PLEASE DO NOT CREATE A RESOLUTION WITH AN EMPTY TITLE!

After that, a button should appear with the title of your resolution:

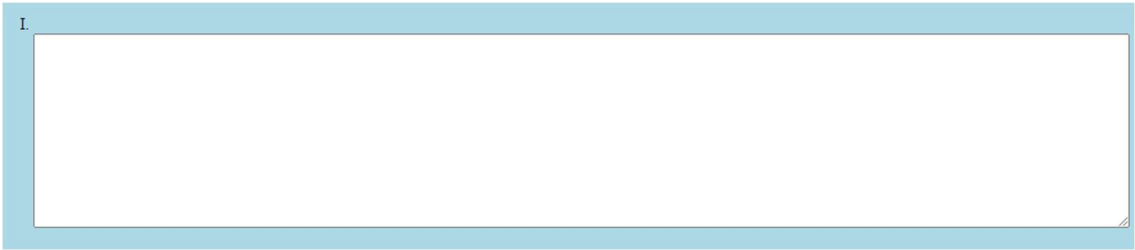
Click it to access what you're here for: the editor.

First look at the editor:

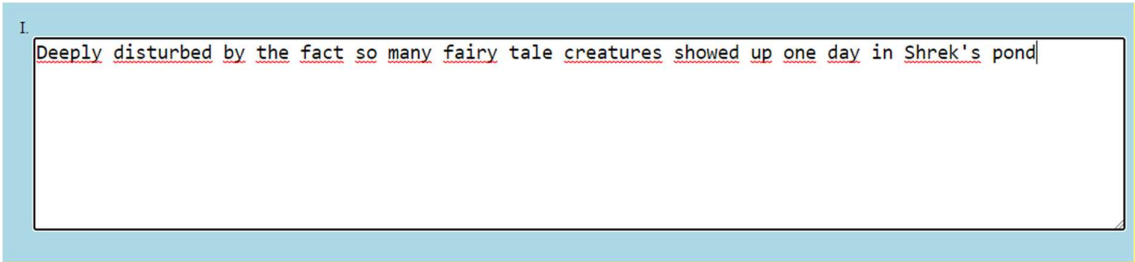


Let's create a perambulatory clause as an example:

A blank text box appears that you can write your preamb in (in web programming, you'll refer to these as textareas)



This is what it looks like after some text has been submitted



ResoMUN recognizes a certain amount of preambulatory and operative words. If one or more that you've used do not appear, you can always email alexandrerobic312@gmail.com to get them added. There is also no need for punctuation on the end of clauses, subclauses or subsubclauses, ResoMUN does that for you (why work when Alex already did the work for you?).

Feel free to Save your resolution at any moment (but note that any empty clause will be erased).

You'll get a message saying your resolution has been saved and your page will refresh:

This is what the resolution looks like so far:

I'll make an operative clause next (note that every time you create a clause, subclause or subsubclause, your resolution is saved for you):

use ResoCode:
ResoMUN:147;59!2

Main submitter: Armenia

Signatories: (0)

I.

Deeply disturbed by the fact so many fairy tale creatures showed up one day in Shrek's swamp

Create Preamb Clause

1.

Deplores the damage done to his swamp by so many fairy tale creatures

Create subclause (121)

Save Resolution | Create Clause | Preview

This is what the resolution looks like now.

At any moment, you can click the 'Preview' button to see what your resolution will look like during debate, click 'Edit' to go back to editing:

Signatories: (0)

THE SESAME STREET CRISIS COMMITTEE,

I. *Deeply disturbed by the fact so many fairy tale creatures showed up one day in Shrek's swamp,*

1. **Deplores** the damage done to his swamp by so many fairy tale creatures;

Signatories

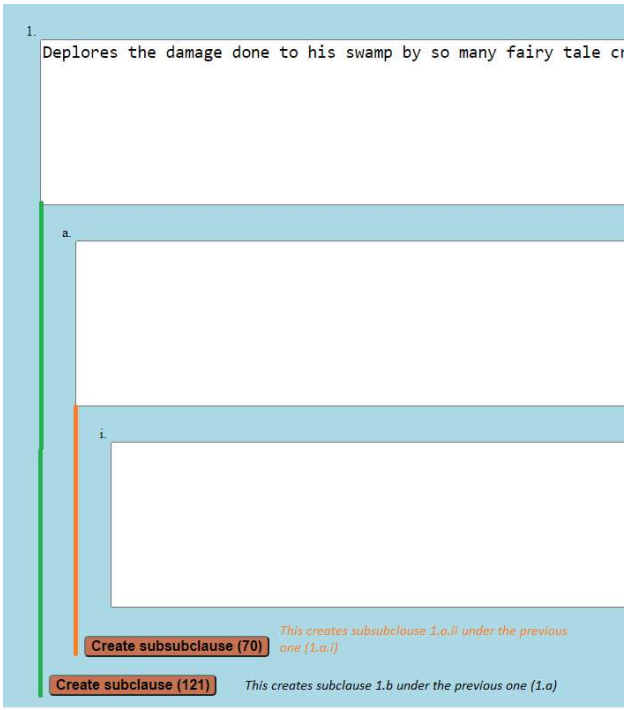
Main submitter: Armenia

(Shrek Ogre)

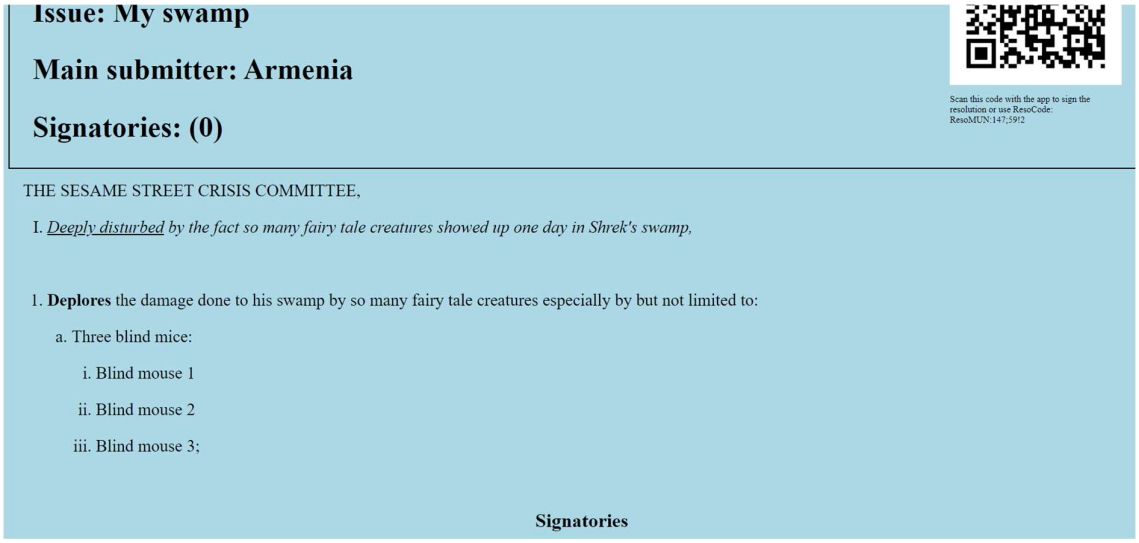
RESOMUN

(Note that by default, you're a signatory of your own resolution)

You can also add subclauses and subsubclauses just by clicking the appropriate buttons (don't mind the numbers in the buttons):



After a few additions, this is what the resolution looks like:



Now that resolution writing is done, let's debate one.

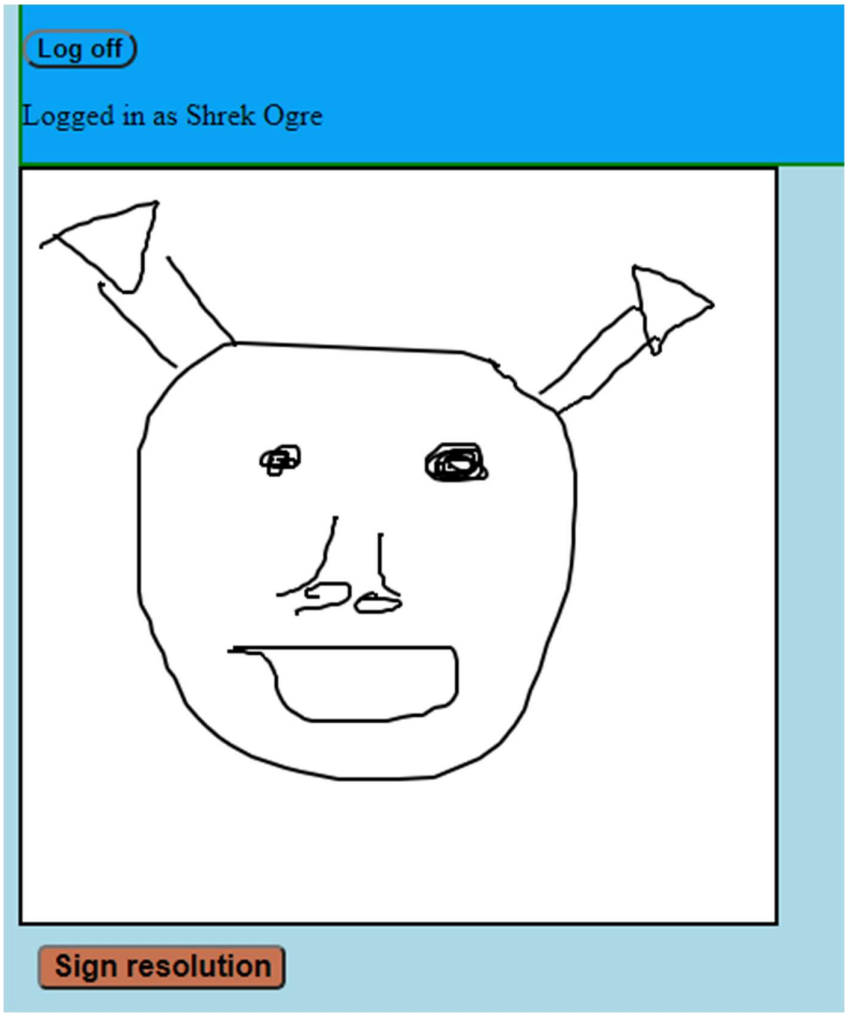
Go back to 'My ResoMUN' (hint: there's a button for this at the bottom of every page), look for the 'See a resolution published by another delegate' section and enter the ResoCode for the resolution you want to check out:

Here, the infamous banana resolution (feel free to check it out at any time).

Can you sign the resolution? 2 cases are possible:
-You haven't signed it and you want to (and you can cause you're in the appropriate committee)
-You're the main sub and you haven't "signed it" (aka drawn a signature)

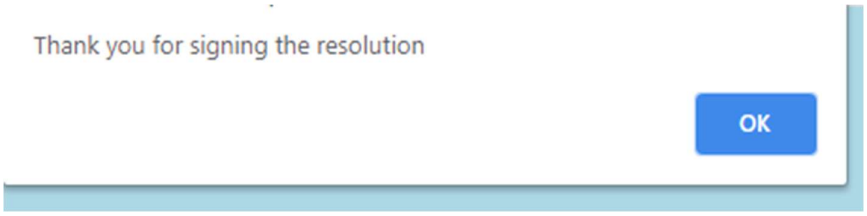
If you're in one of those 2 cases, the top right corner should look like this:

Click the 'Sign resolution' button to sign your resolution



Draw your signature (if you have a touch screen, gg)

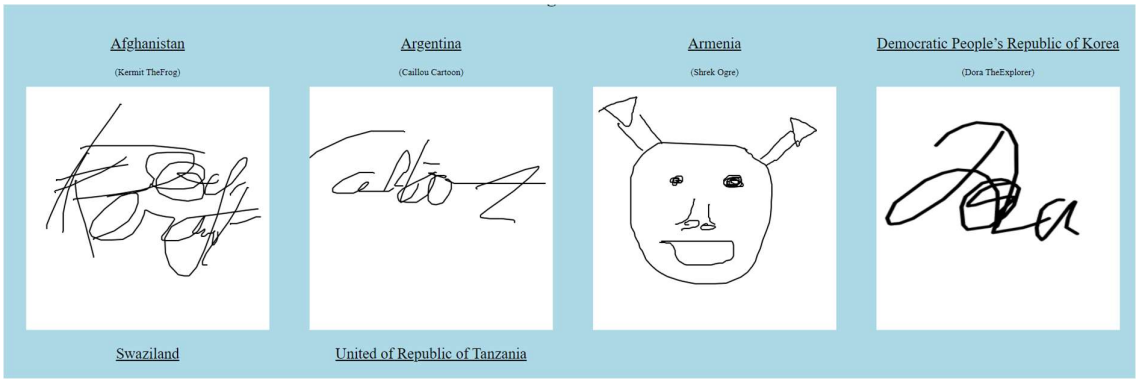
Click the 'sign resolution' button, you should get a confirmation message:



2 things happened:

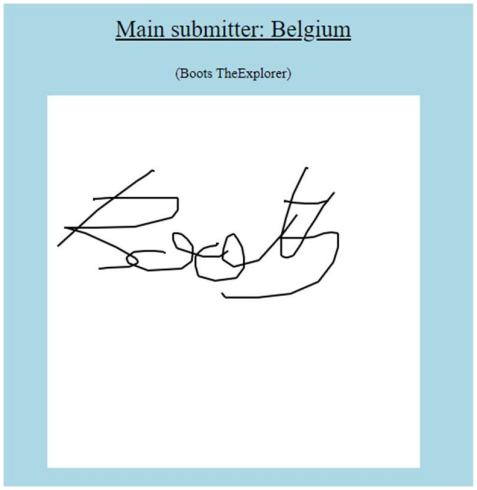
Signatories: Afghanistan, Argentina, Armenia, Democratic People's Republic of Korea, Swaziland, United of Republic of Tanzania (6)

If you aren't the main submitter, your delegation should appear in the signatories' section in the header (they're sorted alphabetically).



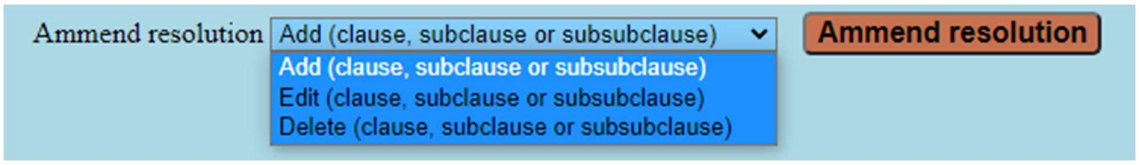
Your signature now appears at the bottom of the resolution with your name and country (if you're not the main submitter).

If you are the main submitter:

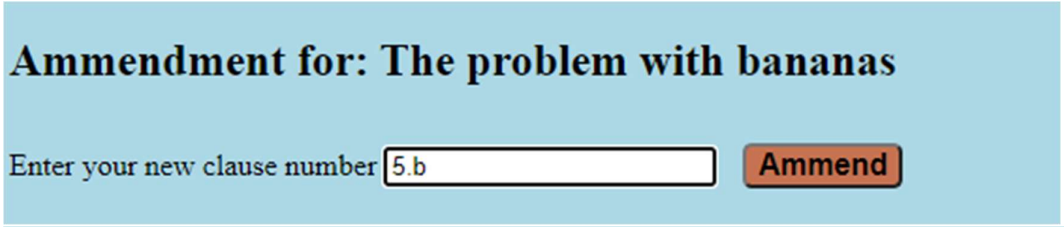


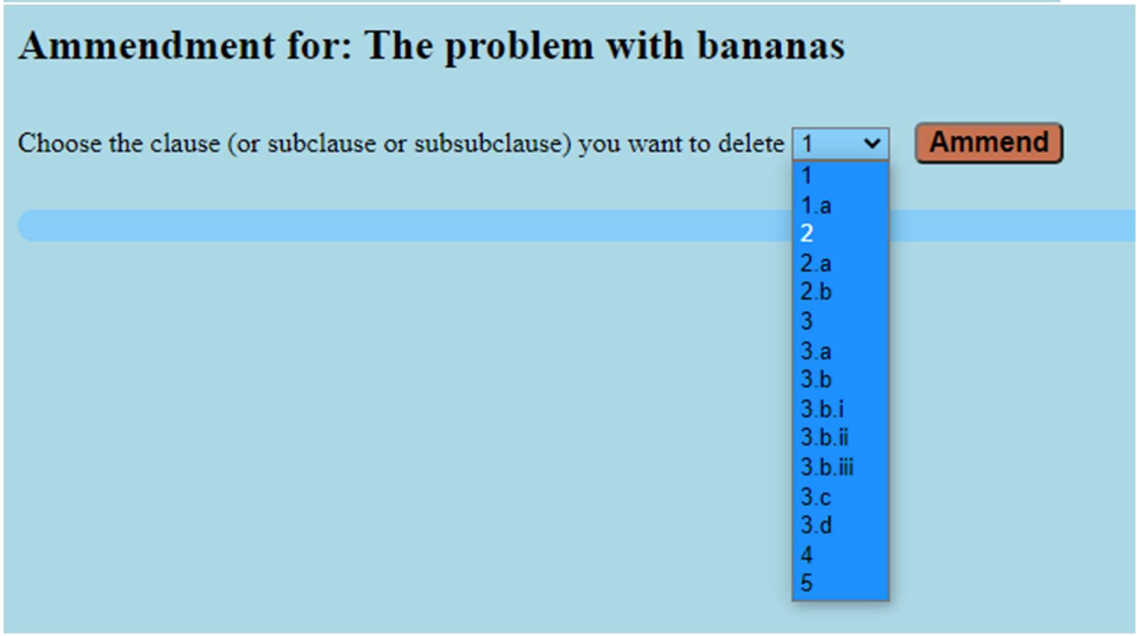
The default placeholder for signatures is now gone, your signature will appear instead.

Something missing, wrong in the resolution? You can amend it using the provided amendment tool. Choose whether you want to add, delete or edit a clause, subclause or subsubclause and click the 'Ammend resolution' button:

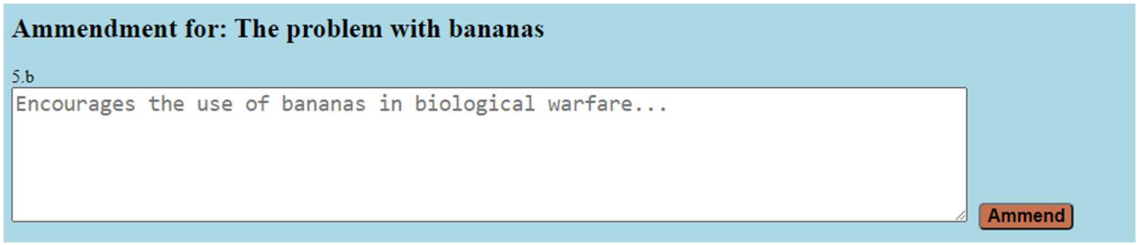


Enter the number for your clause in the case you want to add or select in the case of editing and deleting the section you want to modify.



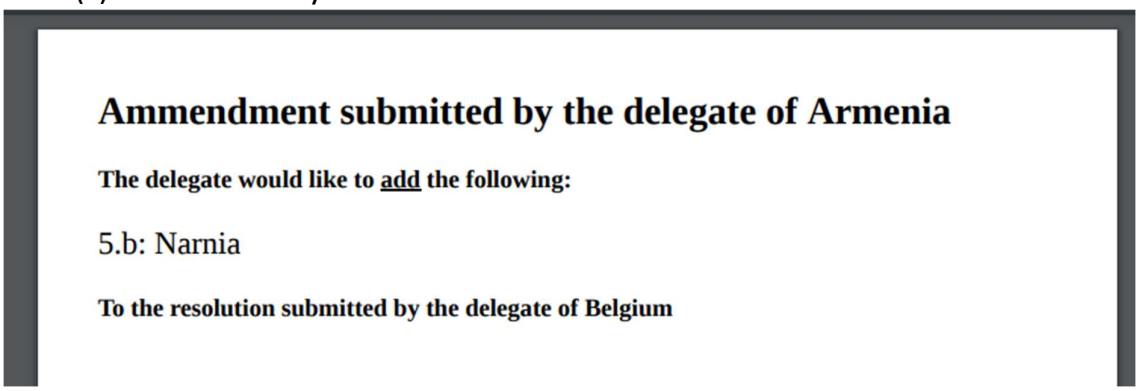


In my case, I'm adding something to the resolution. This is what I obtained:



Once your fill in the amendment textarea (in the case of an addition), edited the text area or selected a section to delete, click the 'Ammend' button.

You will get a summary of your amendment as well as a message saying your amendment was submitted.
Clicking the 'My ammendment' button will show you the PDF file the chair(s) will show for your amendment debate:



After that, it'll be up to the chairs (and your vote) to pass the amendment. If passed, the changes will occur automatically in the resolution. Don't forget to press the update button from time to time.

Test accounts and conferences

A number of test accounts and test conferences were created in order to better grasp what the final product would look like for the user:

-Elmo Monster

-Grover Monster

-Bert Monster

-Oscar TheGrouch

-Dora TheExplorer

-Boots TheExplorer

-Caillou Cartoon

-Kermit TheFrog

-Alexandre Robic (my test account)

-Donald Trump

-test account

Adding these users to your conference will not do anything. They remain inactive.

Test conferences:

-TESTMUN2020 (contains the infamous banana example)

-KaMUN2019

If you made it to here, thank you for reading the documentation.

ResoMUN is 100% free to use and does not and will never contain advertisement. However, something that isn't free is the server it runs on and that costs around 5$ month. Feel free to donate to my PayPal. Every penny helps keep the server up and running for other conferences and delegates.

Contact

For any requests (adding more operative words, information about ResoMUN, inviting Alex to your in-person events):

Alexandrerobic312@gmail.com

Official ResoMUN facebook page: https://www.facebook.com/resomun

Geeky section

ResoMUN requires 44 php files, 2 python files, 3 shell files, 2 txt files, 1 SQL file and a CSS stylesheet.

Software required:

-Client side: web browser that supports php and a pdf reader

-Server side: python3, postgresSQL, apache2, php

Special Thanks

SciencePo MUN for their support throughout the entire development process

Daria Kisseleva for her feedback and for using ResoMUN in a conference

Claire David for being my databases teacher (and teaching me postgresSQL)

You, for using ResoMUN and reading this documentation until the end. As a reward, I can tell you about a secret easter egg hidden in the software. Try looking for pikachu.
